PROFILE

Computer Engineering student (UBA) focused on software development and IT infrastructure. I build custom backends and frontends, and deploy and maintain the systems on my own Linux servers. I'm comfortable across the whole cycle: from code to virtualization, containers and deployment.

EXPERIENCE

Developer & Sysadmin
NUMEN

March 2026 – Present
Buenos Aires, Argentina

- Development of **PuppetHub**, a microservices ecosystem for social-media automation, web scraping and proxy management: backends in TypeScript (NestJS, Express) and Python (Flask), with a Next.js admin UI.
- Orchestration of the ecosystem as a meta-repo with git submodules and inter-service contracts (SocialHub, ConsoleHub, ScrapperHub, BrowserHub, ProxyHub).
- Systems administration: installing and operating the services on Linux servers virtualized with Proxmox and packaged with Docker.

IT Support, Infrastructure & Development
Reboot (MSP)

January 2022 – March 2026
Buenos Aires, Argentina

- Custom development for client companies: a manufacturing MES system (Node.js/React monorepo, deployed on Proxmox), AFIP e-invoicing integration (WSAA/WSFE), workshop management and a corporate website.
- Linux servers: virtualization with Proxmox and administration of Debian, Ubuntu and Gentoo (web, databases, mail and DNS), on-premise and in the cloud, with Docker.
- Networking and support: switches, routers and firewalls; VLANs, VPNs, WiFi and structured cabling. Deployments of ERP, monitoring, backups, Active Directory and camera systems.

SELECTED PROJECTS

negra-backup TypeScript

Self-hosted backup manager: a central server orchestrates agents running on each machine that run the backups and upload the files to the configured destinations.

damn-ups TypeScript

Distributed system for monitoring and controlling UPS power, with automatic shutdown on outages.

julssh Go

SSH (and RDP/VNC) connection manager for the terminal: a TUI with Google Drive sync and self-update.

naturoutes Next.js · Leaflet/OSM

Bike and walking route planner on a map, with automatic routing and elevation profile. 100% in the browser, offline PWA.

Luca Journey Python · Pyodide/WASM

Interactive course to learn Linux and Python from scratch, with a Pokémon theme and real Python running entirely in the browser.

TECH STACK

Languages: TypeScript, JavaScript, Python, Go, Java, C++, Haskell, Bash

Backend: Node.js, NestJS, Express, Flask, Prisma, PostgreSQL, REST

Frontend: React, Next.js, Astro, Leaflet, HTML/CSS

Infrastructure / DevOps: Linux (Debian, Ubuntu, Gentoo), Proxmox, Docker, GitHub Actions, Netlify, networking (VLAN/VPN), Active Directory

Tools: Git, Playwright, OpenCV, Pyodide/WASM

EDUCATION

Computer Engineering · UBA, School of Engineering (FIUBA)

2026 – Present

BSc in Computer Science · UBA, School of Exact and Natural Sciences (FCEyN)

2023 – 2026

Coursework: Algorithms and Data Structures I–III, Digital Systems, Introduction to Software Development.

LANGUAGES

Spanish (native) · English (intermediate)
